

LinkFixerPlus™ for Microsoft® Office

Automatically fix links when you move or rename files!

Product Data Sheet

Do you need to perform a data migration of Word, Excel, Access or PowerPoint files that contain links to other files?

Many Microsoft **Word, Excel, PowerPoint and Access** files contain links to other files. Thus the special problem of what to do when moving or renaming the files can occur, especially during data migrations. For as soon as these files (or the folders they reside in) are moved or renamed, broken links occur.

If moving or renaming a file or a folder causes only a few broken links, the problem is not severe. You can manually open each file and manually fix each broken link. But what if moving or renaming files or folders would cause tens, hundreds or thousands of broken links?

Introducing *LinkFixerPlus for Microsoft Office*

This is the problem that LinkTek's patent-pending product, *LinkFixerPlus for Microsoft Office*, solves. Using *LinkFixerPlus for Microsoft Office*, you can easily move or rename Word, Excel, PowerPoint and Access files, and the files they link to, in batch, and have all of the links maintained totally automatically!

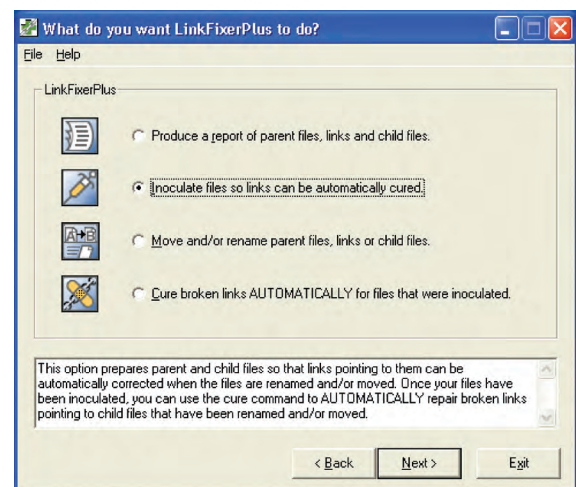

In addition, *LinkFixerPlus for Microsoft Office* can fix — either semi-automatically or fully automatically — broken links caused by files that were previously moved or renamed.

What else can *LinkFixerPlus* do?

In addition to moving or renaming files without causing

broken links, *LinkFixerPlus* can:

- **Produce detailed reports:** *LinkFixerPlus* generates a variety of detailed reports showing parent files, the links pointing to child files and the status of each of the links. The reports enable you to easily view links contained within supported parent file types and quickly identify which links are broken.
- **Repair links fully automatically:** Once you run *LinkFixerPlus'* Inoculate command on a set of Office files, you can fix broken links in those files totally automatically — at the push of a button!
- **Repair links semi-automatically:** You can repair

LinkFixerPlus' main functions: Reports, Inoculate, Rename/Move and Cure

Product Data Sheet — page 2

broken links quickly and easily in large sets of files — even in files that have not been inoculated — by executing a simple, but powerful global search and replace command to modify the names of folders or files stored in link paths.

LinkFixerPlus — benefits at a glance

LinkFixerPlus for Microsoft Office gives users the ability to:

- Rename or move linked files, in batch, using sophisticated rename rules, without causing broken links in the files that point to them.
- Safeguard healthy links in files, allowing them to be automatically repaired should they become broken.
- Fix broken links in safeguarded files totally automatically.
- Generate a broken link report listing all files containing broken links, so they can be fixed before causing problems.
- Generate a regular report listing each file followed by a list of the files it links to.
- Generate a cross-reference report listing each linked file followed by a list of all the files that point to it.
- Report whether a file is being pointed to by any Word, Excel, PowerPoint or Access file anywhere on a user's system, thereby letting the user know whether the file is safe to delete.
- Fix broken links in large sets of files with a single command using sophisticated global search and replace operations.

Using *LinkFixerPlus for Microsoft Office*, you can quickly, dependably and easily maintain the integrity of all the links contained within your Word, Excel, PowerPoint or Access files, even during data migrations.

The image displays three overlapping screenshots of the LinkFixerPlus software interface. The top-left screenshot shows a 'Regular Report' with fields for 'Date and Time' (Friday, 6 June 2003 02:05 pm) and 'Settings'. The top-right screenshot shows a 'Cross Reference Report' with a 'Date and Time' field (Friday, 6 June 2003 03:04 pm). The bottom screenshot shows a 'Broken Link Report' with a 'Date and Time' field (Friday, 6 June 2003 02:59 pm) and a list of broken links, including entries like 'Parent File: C:\Program Files\LinkFixerPlus\Sample Files\001\Child File.xls' and 'Link: "C:\Program Files\LinkFixerPlus\Sample Files\Images\LinkFixerPlus.bmp" -> Missing child file (1 link)'. A sidebar on the right side of the bottom screenshot contains a list of file types: .doc, .dot, .docx, .dotx, .xls, .xlt, .xlsx, .xltx, .xlsb, .ppt, .pot, .pptx, .potx, and .mdb.

LinkFixerPlus for Microsoft Office offers detailed reports of links contained within Word, Excel, Access and PowerPoint files.
