

Newest Release of Popular Data Migration Tool Automatically Fixes Broken Links in Microsoft Office 2010 Files

Description: *LinkFixerPlus* is the only data migration tool that automatically repairs broken links in a wide variety of file types, when files or folders are moved or renamed. Latest release adds support for Microsoft Office 2010 including Word, Powerpoint, Access and Excel.

CLEARWATER, FLORIDA, USA — LinkTek Corporation, the world's leading provider of software solutions that automate the management and repair of links contained in a wide variety of popular file formats, announces the addition of support for Microsoft Office 2010 products, including Word, Powerpoint, Access and Excel.

UK-based Bloor Research reports that, by survey, more than 80% of data migration projects run over time or over budget. According to Bloor, one main reason is that “75 percent of companies had to develop their own methodology for data migration”. In a different study, Enterprise Strategy Group surveyed 700 end users and found that “83 percent of data migrations experienced problems”.

With worldwide projections of ever-increasing amounts of IT budgets going into data migration projects, as reported by Bloor research, *LinkFixerPlus* is the logical solution to problems resulting from broken links when migrating data. Also the first software application that can automatically *safeguard* links in a multitude of file types — including Word, Excel, PowerPoint and Access files — *LinkFixerPlus* can now do the same for Office 2010. When broken links occur after migrating data from one location to another or for other reasons (such as Office upgrades), *LinkFixerPlus* can be used to find and fix those broken links automatically.

Using exclusive, patented technology, links in files can be “safeguarded” in advance so that when files are moved or renamed (such as during a Novell to Windows data migration), *LinkFixerPlus* can then be used to automatically find and fix broken links in

the moved or renamed files, in batch. Imagine not having to manually find or fix broken links after migrating files from one server to another.

In addition to Office files, *LinkFixerPlus* can also automatically fix broken links in Windows shortcuts, PDF, AutoCAD, MicroStation, InDesign, PageMaker and other file types when links are broken due to files being moved or renamed during server upgrades, server consolidations, server name changes, new storage servers, folder reorganizations, software upgrades, file virtualization or adoption of document management systems such as SharePoint, Open Text Livelink, EMC Documentum and others.

LinkFixerPlus is the ideal solution to find, report, manage and repair links in many different types of files whether you are working with hundreds of files on a desktop computer or millions of files during a file or data migration or even folder reorganizations.

How to Contact LinkTek

For more information *LinkFixerPlus* or to receive a trial version, call LinkTek at 727-442-1822 extension 9420 or e-mail 9420@LinkTek.com or visit LinkTek on the Web at www.LinkTek.com.

About LinkTek

Headquartered in Clearwater, Florida, LinkTek Corporation provides software solutions for automating the management and repair of links contained within a wide variety of prevalent file formats. LinkTek's flagship product *LinkFixerPlus* breaks new ground and introduces the new software category of "automatic link repair". It is a leading data migration and link repair tool used by some of the world's largest corporations.

LinkFixerPlus is the first application designed to automatically fix broken links when files are moved or renamed.
